

Executive Summary

Ever Capital is an investment company with over €130 million in assets under management (AUM) that offers participants a selection of funds and managed accounts with the aim of maximizing returns for our clients.

Established in 2015, Ever Capital was founded with the primary objective of investing the capital of its founding partners. Shortly thereafter, we expanded our reach by offering investment opportunities to family and friends, while also bringing in institutional investors.

Our investment strategy focuses primarily on high-yield bonds and capital structure arbitrage. This approach allows us to leverage our deep understanding of these markets to achieve optimal returns.

Our first fund was created in 2016. The average return on our vehicles is over 10% per annum, including our managed accounts. Ever Capital has an experienced team with an average of over 15 years of experience.

Ever Capital in Brief

Flexibility: High yield bonds (HY), equities and derivatives (mainly as currency hedges) make up our eligible assets.

Independence: Credit analysis is conducted internally using a dual approach, combining macro trend analysis methodologies and micro credit analysis.

Active Management: Pricing is key, our assets have strong credit fundamentals. We identify price imbalances to capitalize on investment opportunities and realize potential capital gains.

Personal Commitment: Founders, managers and clients share direct investments in our funds, ensuring a strong alignment of interests.

Investment Process

Our investment process is defined by active management, where each investment decision is guided by market imbalances, relative value analysis and price considerations.

Trend Analysis: Our analysis begins by examining market trends and industry dynamics, with a strategic emphasis on sectors characterized by high barriers to entry.

Fundamental Analysis: Using fundamental analysis, we focus on companies that show solid metrics, a strong management team, competitive advantages and a track record of economic value creation. In addition, we actively monitor potential special situations and imbalances in the entity's capital structure.

Eligible Assets: We look for companies with $ROE > \text{Cost of Capital}$, $ROCE > WACC$. In terms of debt, we focus on companies with $\text{Net Debt/Ebitda} < 3.5X$. Probability of default at one year $< 5\%$. 60-80 companies under analysis.

Entry and Exit Point: The price is fundamental to define the entry and exit point in the assets of our investments.

Investment Process

Strong credit fundamentals and credit imbalances prices determine our investments

Our investment asset universe is shaped by a dual analysis; macro trends and complemented by detailed credit analysis. This dual approach guides our investment decisions, ensuring a comprehensive and informed portfolio strategy.

Managers identify imbalances arising from macroeconomic or credit events, such as COVID, Brexit or breach of corporate expectations. Assets may experience price imbalances in absolute or relative terms and this will guide our strategy to capitalize on opportunities.

Ensuring best execution is critical to achieving more favorable returns on our investment vehicles. Collaboration with leading market makers and intermediaries underscores our commitment to optimal investment results.

High Yield Assets and Capital Structure Arbitrage

- Our primary focus is on the high yield (HY) bond market, which, given its risk-return profile, provides our clients with the optimal opportunity to earn double-digit returns.
- Our internal analysis allows us to make decisions and strategically fit them within our investment universe. Our monitoring of market flows supports our decisions, ensuring well-founded actions to achieve optimal results.
- Strategic positioning along the capital structure is achieved through fundamental credit analysis, selecting the appropriate asset between bonds and equities.
- Our yields should be between a global index and the index of high-yield (HY) bonds.

Returns by Type of Assets

Investor Benefit

- Attractive yields, portfolios incorporating High Yield yields improve their results due to the carry trade obtained throughout the investment. The passage of time favors the investor.
- Potential for capital appreciation in the event of positive credit events.
- High-yield (HY) bonds tend to have a good performance in periods of economic recovery.

Risk and Risk Compensation

- Investors in this asset class face a high risk of default. However, this risk can be mitigated by strategically selecting assets with an annual probability of default of less than 5%.
- Market liquidity. The high yield (HY) bond market is less liquid than other asset classes. However, within HY, we tend to focus on securities that would allow us to liquidate our portfolio in less than a week.

Types of Alternative Assets

	Profitability	Risk	Liquidity	Rating
HY Bonds	++	++	++	++
Shares	+++	+++	+++	N/R
High Grade Bonds	+	+	+++	+++
Direct Lending	++	+	+	N/R

Ideas are the Key to Success

2016

- ✓ Market performance was influenced by two events: Brexit and the election of Donald Trump.
- ✓ The capitalization of this event was implemented with the purchase of iPath Series B S&P 500 VIX short-term futures.

2017

- ✓ Donald Trump's first year in the Casablanca marked the evolution of financial markets.
- ✓ Codere's debt restructuring involved exchanging bonds for shares. Double-digit gains were obtained.

2018

- ✓ The trade conflict between the United States and other countries, especially China, led to a trade war that introduced high volatility in the financial markets.
- ✓ We adopt a positive outlook on oil price developments during the second half of the year.

2019

- ✓ Aldesa was our star deal in 2019. The acquisition by China Railway took bonds that were trading at levels close to 35% to almost 100%.
- ✓ We negotiated CajaMar subordinated bonds.

2020

- ✓ February saw the Covid-19 outbreak. The market experienced sharp declines, especially during the confinement, but by the end of the year, most sectors and stocks had recovered some of the decline. Allowing us to take positions in bonds at historically low prices.

2021

- ✓ The year after Covid, after the dramatic situation experienced, the market experienced an exceptional performance in the financial markets.
- ✓ We focused on the bonds and shares of Consol Energy and OHLA, which carried out the refinancing of its capital structure together with the entry into the shareholding control of the Amodio family.

2022

- ✓ The outbreak of the war between Ukraine and Russia and the evolution of oil and commodity prices market trends were determined by raw materials.
- ✓ Nine Energy, KLXE and Gran Tierra Energy bonds and stocks were our most profitable operations.

2023

- ✓ Central bank monetary policy and inflation trends set the tone for the year. The first part of the year was dominated by interest rate hikes and the trend reversed during the last quarter. Tullow Oil bonds and Audax shares have boosted our portfolios.

Ideas are the Key to Success

2019: Aldesa Trade

✓ Aldesa, a Spanish construction company with more than 50 years of history faced financial challenges in 2018 marked by substantial declines in revenues, EBITDA and cash flow generation. This difficulty translated into a drop of more than 40 points in bond prices.

✓ China Railways, acting as a white knight, took control of 75% of Aldesa's capital. In a strategic move, they carried out a \$250 million capital increase, using the funds to acquire debt. This move was key to the company's deleveraging policy.

✓ In the first quarter of 2019, the strategy was implemented with the conviction that such a credit event could occur, we entered at an average price of 50%, and the exit was at 90% levels after China Railways announced the acquisition.

2021: Athabasca Trade

✓ In February 2020, the outbreak of the Covid-19 pandemic in Europe and the United States triggered sharp declines in the markets, especially during the confined months of February and March.

✓ The Oil and Gas sector suffered price declines due to a severe contraction in demand. We strategically prioritized this sector due to its high barriers to entry.

✓ Athabasca Oil, with strong credit fundamentals, experienced a significant drop in prices due to demand shock and costs incurred during the impoundment period.

✓ Recognizing the potential for recovery during the first quarter of 2021, we strategically acquired the bonds. The position was established at 60% levels and we exited when the price exceeded 90% levels.

Aldesa 7.25% 01/04/2021

Athabasca 9.875% 02/24/2022

Ideas are the Key to Success

2022: Nine Energy Trade

- ✓ In 2020, with the Covid-19 outbreak, most companies in the oilfield services sector suffered a dramatic price drop, and Nine Energy was no exception.
- ✓ While most of the companies in the sector had already been recovered to pre-pandemic levels, Nine Energy was lagging behind.
- ✓ The credit fundamentals were not very strong, but in talking to management, we understood that they were on the road to recovery and that there would be a turnaround in terms of revenue and credit metrics.
- ✓ It was practically a 12-month operation; we started to implement the operation when the bonds were trading around 50 cents on the dollar and we closed the position when bonds were trading at 80%.

2023: OHL Trade

- ✓ In 2017, OHLA ran into financial difficulties. During this period, existing bonds began to trade in the 60% area. Complicating matters, the company faced investigations related to irregular Págs.os linked to obtaining public contracts, exacerbating strains on existing bonds, which fell to 40% levels in 2019.
- ✓ To avoid bankruptcy, OHLA implemented a debt restructuring, a capital increase and a new shareholder control. As a result, existing bonds began to appreciate.
- ✓ The 2022 and 2023 bonds were exchanged for a new secured, callable bond with an extended maturity and higher coupon. The new features give holders the right to partially repurchase 100% of the bond in the event of proceeds from the sale of assets.
- ✓ The transaction was implemented when the bonds were trading in the 50% area, waiting for the corporate event to occur, we went to the bond swap. Currently, we are still awaiting further partial redemptions at 100% and while receiving a 9.75% coupon.

Nine Energy 8.75% 01/11/2023

OHLA 5.1% 03/2026

The Team

Rubén González López : Portfolio Manager

ruben.gonzalez@evercapitalsv.com

[+34 91 382 7946](tel:+34913827946)

Ever Capital Different Shapes of Investing

Managed Accounts

Managed Accounts

Our approach focuses on recognizing and embracing the individual needs of our customers.

We follow a personalized approach to investments, where our policies are tailored to the risk-return profiles of our clients.

Investors are invited to participate with a minimum amount of €1MM.

We believe in a pricing structure based on relative value, with a 1.5% management fee and a 15% success fee that ensures that our clients' interests are aligned with our own.

CACEIS (formerly Santander Securities) or Andbank Luxembourg are our custodian banks to guarantee our clients' investments.

Clients initiate the account opening process with the custodian bank, entrusting Ever Capital to manage the account.

Our objective is to achieve the highest returns vs. minimizing the associated investment risk. The average return on managed accounts in 2022 was over 12% and in 2023, the average return was over 20%.
